INDEX

behavioral models, 1, 3, 8, 11, 13, 15, 103–4. *See also* social-welfare example; voter-turnout example
binary outcomes, 111–23

centering, 21–22, 49, 93–99
chained interaction, 39–42, 59–60, 73–74
Classical Linear Regression Model, assumptions, 17, 47, 83, 107–11, 124–29
cluster, 126–30
colinearity, 7, 77, 93–99, 113
conditional effects. *See* marginal effects
confidence intervals: hourglass shape, 64–65, 73–74, 84–85
  hypothesis tests, 47–49, 51–53, 61–78
  marginal effects, 61–78
  predicted values, 79–88
  predicted values, differences in, 88–91
Cox, Gary W. *See* presidential-candidates example
Cronbach, Lee J., 93–99
cumulative probability distribution function, 114, 119, 135

delta method, 119–23
derivative/first derivatives. *See* differentiation
deterministic (vs. stochastic) relationships, 5–6, 14, 16–18, 110, 123–30
dichotomous variables. *See* dummy variables, dependent and independent
differences in predicted values. *See* predicted values
differentiation, 20, 22–43, 50, 61–78, 88–91, 111–23, 134–35. *See also* marginal effects
direct vs. indirect effects, 19–22
discrete changes, effects of, 26–28, 88–91, 114, 119. *See also* dummy variables, independent; ordinal variables; predicted values
dummy variables, dependent. *See* binary outcomes
dummy variables, independent, 27, 28–29, 67–68, 74–75, 85–86, 88–89, 103–11

feasible generalized least squares, 110, 127–28, 129

feasible weighted least squares, 128, 129
F-tests, 45, 50–51, 54–60, 73, 108–10

government-duration example, 29–32, 34–37, 39–42, 44, 56–60, 69–78, 86–88, 91, 137
graphing: choosing values to graph, 61–66, 141–42
  marginal effects with confidence intervals, 61–87, 136–40
  predicted values with confidence intervals, 88–91, 141–44

heteroskedasticity, 17, 109–11, 124–30
hierarchical models, 5, 17, 123–30
hierarchical testing, 99–102
homoskedasticity, 17, 109–11, 124–30
Huber-White standard errors, 126, 128
hypothesis tests, 43–60
  directional, 45–50, 53–55, 57
  null hypothesis, defined, 45

independent vs. total effects, 19–22
institutions/institutional analysis, 2–3, 8–11. *See also* government-duration example; hierarchical models; presidential-candidates example
interactive arguments, 2–3, 8–12, 14–16

lincom (STATA command), 61, 138, 144, 146
linear-additive model, 1–2, 14, 20, 46
logarithmic transformations, 27, 32, 34–37, 58–59, 70–73, 87–88, 91, 135
logit/logistic. *See* binary outcomes

main vs. interactive effects, 19–21, 23, 43–44, 64
marginal effects, 22–43, 44–60, 61–78, 88–91, 111–23, 132, 136–41, 144, 146
  confidence intervals, 61–87, 136–40
  standard errors, 48, 52, 58–59, 119–22
mean-centering, mean-rescaling. *See* centering
mediating vs. moderating variables, 3
moderating vs. mediating variables, 3
multilevel models. *See* hierarchical models

nonlinear models, 5, 28, 111–23
nonlinear transformations. *See* logarithmic transformations; quadratic transformations; slope-shift models; spline models

omitted-variable bias, 46, 93–94, 99–102
ordinal variables, 26–27, 103, 115–16

pairwise interaction, 40–42, 74–78
path analysis, 3
pooled-sample vs. separate-sample estimation, 5, 103–11
postestimation commands, 48, 61, 81, 122–23, 138. *See also* lincom
predicted probabilities, 115, 118–19, 122–23
  differences in and standard errors around, 119, 122–23
predicted values, 25–26, 28–39, 61, 78–92, 141–44. *See also* predicted probabilities
  differences in and standard errors around, 25–26, 33–34, 36, 88–92
  confidence intervals, 78–92
  standard errors, 78–92, 141–44
presidential-candidates example, 13–14, 18–21, 23–26, 44, 51–54, 62–67, 81–85, 90–91
principal-agent models, 10–11, 13
probability density function, 114, 135
probit. *See* binary outcomes

quadratic transformations, 32–34, 35, 57, 69–71, 86, 91

random-coefficient models. *See* random-effects models
random-effects models, 5, 17, 123–30
robust standard errors, 126–30

separate-sample estimation vs. pooled-sample estimation, 5, 103–11
slope-shift models, 37–39
social-welfare example, 27–29, 44, 54–56, 67–68, 85–86, 106–8
spatial correlation, 11, 126
spline models, 37–39
standard errors: of coefficient estimates. *See* variance-covariance matrix, defined
  of differences in predicted values. *See* predicted values, differences in and standard errors around
  of marginal effects. *See* marginal effects, standard errors
  of predicted values. *See* predicted values, standard errors
STATA, 48, 61, 129, 136–46
statistical tests of interactive arguments, 43–60
stochastic vs. deterministic relationships, 5–6, 14, 16–18, 110, 123–30

tables: choosing values to list, 61–66, 141–42
  differences in predicted values and standard errors around, 88–91, 141
  marginal effects and standard errors around, 52–57, 136–40
  predicted values and standard errors around, 78–88, 141–44
temporal correlation, 11, 126
three-way interactions, 39–42, 59–60, 73–78
threshold model, 37–39
total vs. independent effects, 19–22
t-tests, 43–60, 72–73, 99–102, 108–11

variance: of differences in predicted values. *See* predicted values, differences in and standard errors around
  of forecast error, 47
  of a linear combination of constants and random variables, 47, 80–81
  of marginal effects. *See* marginal effects, standard errors
  of predicted values. *See* predicted values, standard errors
variance-covariance matrix
  defined, 48
  examples, 52, 55, 56, 121, 138–45
voter-turnout example, 115–22

White's robust standard errors, 125–30
